Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance: The references cited have failed to teach and to make obvious a flow rate sensor comprising at least one bypass circuit having switch means for selectively short circuiting a part of the even number of resistors so as to perform bypassing; at least one flow rate range increasing differential circuit for detecting a potential difference between the bypass circuit and the connection point between the reference resistors; and a second flow rate decision unit for detecting the flow rate of the fluid flowing in the fluid passage according to the potential difference output from the flow rate range increasing differential circuit; first flow rate detection means for detecting the flow rate of the fluid flowing in the fluid passage according to the voltage to both ends of the main resistor and the reference

value obtained by the reference detection means; third flow rate detection means for obtaining the flow rate of the fluid flowing in the fluid passage by calculating the difference between the voltage between the upstream side end and the upstream side terminal and the voltage between the downstream side end and the downstream side terminal; and a fifth flow rate detection means for obtaining the flow rate of the fluid flowing in the fluid passage according to all the power applied in to the main resistor and the reference value obtained by the reference value detection means
